

ACCESS BEHIND THE TV CUPBOARD

This section is a collection of how to get to the space behind TV / Bar in starboard corner of salon to change a winch, fridge or a/c unit:

- The entire front facing panel slides right out after you remove screws. There are three screws on the bottom of the cabinet and two on the back. These two, you'll have to access from inside the cabinet above the drawer refrigerator
- 2014 Helia has the same arrangement but after removing screws you slide the whole unit to the right which releases the right hand end and allows you to pivot the unit out.
- If you have a TV hung in that space, you'll want to remove it before sliding/pivoting the unit out. If you have AC, you'll need to pivot out the panel enough to disconnect the wired "remote" control unit that powers on/off the unit and sets the heat/cool mode, set temperature, and fan speed.
- You then also have access to the underside of the deck winch and stoppers thru here
